

The Rimini Congress has always represented a scientific update for both Veterinary Technicians and Vets, but a good Veterinary Technician must also know how to relate with clients, to achieve the best treatment objectives for patients.

This is why your professionalism also depends on good communication: knowing how to communicate with competence triggers a virtuous circle that ends with patient well-being. This is why at ATAV Rimini you will also find an opinion leader speaker in this field.

The ATAV Rimini International Congress is your opportunity to grow, improve, compare, meet new colleagues, open horizons and establish new relationships by learning operating methods that you will listen from Italian and European speakers that ATAV has invited to broaden your training.

Don't miss your chance, registrations will remain open until all available places are filled.

We are waiting for you in ATAV Rimini !
